

IN THE SPECIFICATION

Please amend paragraph [0019] of Applicants' published specification as follows:

As a scheme for transmitting static media such as and static image using RTP, there is Generic RTP Payload Format for Time-lined static Media (~~<http://standards.ericsson.net/westerlund/draft-westerlund-avt-rtp-static-media-00.txt>~~). This is a scheme in which a duration header is provided to express playback time (duration) and has a feature in which playback time is sent to the receiving side. Moreover, the use of RTP instead of TCP makes it possible to employ real-time transmission of the static media.
